Key Offerings

- Assess – Before we do any implementations, we will meet with your developers, architects, and leadership team to determine if migrating to microservices is a good fit within your organization. Then we will put together a concrete plan that includes organizational strategy, technology recommendations, and a set of milestones to get the job done.

- Re-platform – Moves your applications to newer, less expensive, and more efficient technology platforms

- Design – We'll help you design a robust architecture that will be fault tolerant and improve user experience. We have helped clients migrate to microservices on-premises, in the cloud, and in hybrid environments across multiple industries including finance, e-commerce, scientific computing, higher education, and business service providers.

- Productize – We can help you productize your application, and everything that comes with this process. From improving your developer workflow to applying automation to both testing and customer deployments, we can make it easier for customers to adopt your products in the cloud, on-premises, and in hybrid or at the edge environments

- We will perform an assessment to help determine the proper course of action for you startup, team, or enterprise to align technology adoption with your business goals.
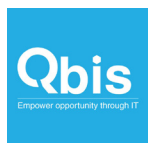

Business Benefits

- Automate - Modern applications are built with automation in mind. From seamless integrations with infrastructure, these technologies help you rapidly respond to changing market dynamics and the needs of your customers. Plus, they can help reduce overhead costs of manual work.

- Reduce Cost - Although modernizing software requires an initial investment, benefits in the form of reduced capital expenditures including licensing are realized almost immediately. We have helped organizations develop modern applications and cut licensing costs within the first year of deployment.

- Secure - Modern applications not only use the newest libraries and strategies to harden their security, but also interface with your current tools to seamlessly integrate into your current security posture. In addition, container technology can significantly harden your applications and protect your users.

About QBIS

We help customer to simplify business & transform process, product,and customer experience, arming them with 'Innovative Solutions' by implementing technology & best business Practices.
